Pleskov, Yu. A.

A METHOD FOR SEPARATING TWO SIMULTANEOUS ELECTROCHEMICAL PROCESSES TAKING PLACE ON A SINGLE ELECTRODE. June 60 [9]p. 4 refs.
Order from LC or SLA m\$1.80, ph\$1.80 60-18442

Trans. of "Zhur[nal] Fiz[icheskoy] Khim[ii] (USSR)
1960, v. 34, no. 3; p. 623-626.

A method is developed for separating two processes occurring simultaneously at the electrode for the case when one of the processes is limiting by diffusion of the reacting particles to the electrode and consequently is dependent on the rate of solution stirring and the rate of the second process which is independent of stirring. The oxidation of Ag_2O in KOH solutions, the ionization of molecular O_2 on gold electrodes, and the oxidation of divalent vanadium on Ge electrodes are investigated by the specified method. THE ROLE OF MINORITY CURRENT CARRIERS
IN THE PROCESS OF ANODIC DISSOLUTION OF
n-TYPE GERMANIUM. [1960] [9]p. 9 refs.
Order from LC or SLA m\$1.80 ph\$1.80 61-10120

Trans. of Akad[emiya] Nauk SSSR. Doklady, 1960,
v. 132, no. 6, p. 1360-1363.

The dependence of a'_0 on the conditions of anodic dissolution of Ge was investigated using the method of W. H. Brattain and C. G. B. Garrett (Bell System Tech. J. 34, 129, 1955). Results showed the a'_0 to be independent of the Ge potential (between 1 and 3 volts) and the same on dissolution in both 1 N H_2SO_4 and 1 N KOH, but $a'_0 \approx 1.3$ in a 48% HF solution. The observed dependence of the current multiplication coefficient a' of the anodic dissolution of Ge on the hole injection current is qualitatively the same as results published by F. Beck and H. Gerischer (Z. Electrochem. 63, 943, 1959).
